

For a multi-page website

Mockup A is a better layout

-using old/original pokemon graphics: maybe pixelate pokeballs and use a more 2000s typeface

-The bottom image might not fit too well with the webpage size so either enlarge or find another image

Mock up B

-the icons are good and the idea of 3 colors represent 3 elements come through very well

-Not sure if you still need the large background

-on the bar maybe include something on the right to balance out
